Automotive DAB Installer Training in the United Kingdom

**Introduction:**

In the UK there are around 36 million vehicles on the road, including 4 million vans and lorries. 92% of new cars sold have DAB digital radio as standard – over 2 million cars per year.

Approximately one third of all cars on the road have DAB and there are 500,000 radios and adapters sold in the car aftermarket.

The UK has a national retailer converting cars, Halfords, with 470 outlets. There are also approximately 800 independent retailers, some of which are mobile, converting cars.

With nearly all new cars sold with DAB as standard, a major area of focus is in converting cars and commercial vehicles already on the road.

From October 2017 to February 2018 a pilot project was undertaken to assess the communications, capacity and products required to convert the UK car parc to digital radio. It was a local collaboration in the county of Surrey between broadcasters, retailers, garages and radio manufacturers.

The activity

The objectives of the project were to convert cars to digital radio, encourage and support new market entrants, learn about effectiveness of industry communications and to conduct qualitative consumer research on car conversion.

Local radio stations ran adverts and competitions for converting cars to DAB and training and visits were arranged to local retailers and garages. Merchandising and point of sale materials were provided to raise awareness of DAB and the benefits of switching. Support was provided to garages and retailers on the installation of aftermarket products.

“This project showed the impact that focussed, local communications can have. By working closely with broadcasters, retailers and garages we have learnt a lot about how to accelerate the adoption of digital radio for Britain’s drivers.”

Sam Bonham, Digital Radio UK

Conclusions and next steps

The local communications raised awareness of DAB aftermarket products and showed that significant scaling of car conversion capability and capacity is possible. 25 consumers were surveyed about their experience and the majority would recommend a DAB adapter for others, with those who had a positive installation experience listening to more stations/radio as a result.
