Paneda proud sponsor of the Estonian DAB trial

Sweden 2022-11-30

Levira, the Estonian network provider are currently together with radio stations testing DAB solutions and possibilities in Estonia. As a pilot project, DAB transmitters will be launched in Tallinna Teletorn (TV Tower) and by the end of the year also in Koeru and Pehka.

The testing is focused on the main roads in Estonia.

Digital radio transmission was last tested in Estonia back in 2000. Since then, the technology has been developed and improved with the addition DAB+ with better error correction solutions, innovative packaging methods, which also allows higher audio quality and possibility to include more radio stations in one multiplexer.

During the testing phase, 12 radio programs are broadcasted on the digital radio network, and all radio stations were also given the opportunity to participate in the testing.

Johan Ericsson, Sales Manager at Paneda says,

“We are happy to see our neighboring countries showing an increasing interest for DAB, and we are happy to support Levira in this project by providing multiplexer and audio encoders as well as education, training and support with the overall goal make this DAB trial a success”
